

Completa guía para una instalación satisfactoria de VMWare Server + entorno Web

Fuente: http://www.howtoforge.com/vmware_server_1.0.4_plus_mui_ubuntu_7.04

```
sudo aptitude install linux-headers-`uname -r` build-essential xinetd
```

Download VMware Server:

VMware Server can be downloaded from:

<http://www.vmware.com/download/server/>

or

```
wget -c http://download3.vmware.com/software/vmserver/VMware-server-1.0.4-56528.tar.gz
```

Don't forget to [Register](#) if you haven't vmware serials already.

```
sudo mkdir -p /etc/vmware/ssl/
```

```
sudo touch /etc/vmware/ssl/rui.key  
sudo touch /etc/vmware/ssl/rui.crt
```

If you're using a 64bit host:

```
sudo apt-get install ia32-libs
```

Installing VMware Server:

Untar the VMware Server package:

```
tar -xvzf VMware-server-1.0.4-56528.tar.gz
```

Change into the install directory:

```
cd vmware-server-distrib
```

Run the installer:

```
sudo ./vmware-install.pl
```

Again you can hit enter to choose the defaults to all the questions, though you will probably want to manually choose which networking features you want. To access the server run

vmware&

for the VMware Server Console.

VMware MUI Instalation - Management Interface

The VMware Server Web-based management interface. Install on your VMware Server system to enable control from a web browser. Includes downloadable VMware Server Console installation files.

Download:

```
wget -c http://download3.vmware.com/software/vmserver/VMware-mui-1.0.4-56528.tar.gz
```

Untar:

```
tar -xvzf VMware-mui-1.0.4-56528.tar.gz
```

Change into the install directory:

```
cd vmware-mui-distrib
```

Fix:

```
sudo ln -s -f /bin/bash /bin/sh
```

Run the installer:

```
sudo ./vmware-install.pl
```

To access go to <https://localhost:8333/>.
